

DALI 4 Channel Dry Contact Input Module

Model No: L31-D4IO

Profile

- 4 channels of dry-contact input/output module, can connect to any dry-contact and convert to DALI commands,
- At the same time, the module linkage outputs 4 open-circuit LED indicator drive signals, can be connected to the indicator light of the dry-contact, indicate the status of related groups, scenes, and single addresses in the DALI circuit,
- Dry contact with small size, installed in the 86-bottom box,
- Dry-contact functions are set through DALI Master software.
- Each dry contact can be flexibly set, long press, short press, can issue various functions such as single address, group, scene, group scene, etc

Features

- DALI bus powered; dry contact input; LED drive output
- Each contact has a compound function, which can produce short and long press control actions;
- Each contact can be independently programmed, and can control 64 DALI devices, 16 groups, 16 scenes, etc.;
- Each contact can be independently programmed to turn on, off, up, down, set scene and other action combination functions;

Technical Parameters

Model No	L31-D4IO
Brand	LAMMIN
Input Signal	4*CH dry contact signal
Input Voltage Range	16V DC
Max Load Current	4mA Max (@16v DC)
Output Signal	DALI signal
Software	LAMMIN DALI Master
Certification	CE
Working Temp	-20℃~+50℃
Warranty	3 years
Size(L*W*H)MM	50*50*13
Installation	86 bottom box

Wiring Diagram and Installations
